**Question** The midpoint of the line segment joining  $A(2a, 4)$  and  $B(-2, 3b)$  is  $(1, 2a+1)$ . Find the values of  $a$  and  $b$ .

**Solution:**

Let us solve the given equation theoretically and then verify the solution computationally. From the given data,

$$\mathbf{A} = \begin{pmatrix} 2a \\ 4 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} -2 \\ 3b \end{pmatrix} \quad (1)$$

Let the midpoint of points  $A$  and  $B$  be  $C$ . where,

$$\mathbf{C} = \begin{pmatrix} 1 \\ 2a+1 \end{pmatrix} \quad (2)$$

We know that the midpoint formula for the points  $A$  and  $B$  is

$$\mathbf{C} = \frac{\mathbf{A} + \mathbf{B}}{2} \quad (3)$$

$$\begin{pmatrix} 1 \\ 2a+1 \end{pmatrix} = \frac{\begin{pmatrix} 2a \\ 4 \end{pmatrix} + \begin{pmatrix} -2 \\ 3b \end{pmatrix}}{2} \quad (4)$$

$$\begin{pmatrix} 1 \\ 2a+1 \end{pmatrix} = \frac{\begin{pmatrix} 2a-2 \\ 4+3b \end{pmatrix}}{2} \quad (5)$$

$$\begin{pmatrix} 1 \\ 2a+1 \end{pmatrix} = \begin{pmatrix} a-1 \\ 2+\frac{3b}{2} \end{pmatrix} \quad (6)$$

From Eq.6 we can say that:

$$2a+1 = 2 + \frac{3b}{2} \quad (7)$$

$$2a = 1 + \frac{3b}{2} \quad (8)$$

$$4a = 2 + 3b \quad (9)$$

$$4a - 3b = 2 \quad (10)$$

And also A,B and C lies in the same line so they are collinear. So,

$$\text{rank}(C - A \quad B - A) = 1 \quad (11)$$

$$\text{rank} \begin{pmatrix} 1 - 2a & -2 - 2a \\ 2a - 3 & 3b - 4 \end{pmatrix} = 1 \quad (12)$$

When the rank of the  $(2 \times 2)$  matrix is 1, it's determinant is 0 .So,

$$\text{Det} \begin{pmatrix} 1 - 2a & -2 - 2a \\ 2a - 3 & 3b - 4 \end{pmatrix} = 0 \quad (13)$$

$$(1 - 2a)(3b - 4) - (2a - 3)(-2 - 2a) = 0 \quad (14)$$

$$4a^2 + 6a + 3b - 6ab - 10 = 0 \quad (15)$$

From Eq.10 we can get

$$b = \frac{4a - 2}{3} \quad (16)$$

Now substituting 'b' in Eq.15, we get:

$$2a^2 - 7a + 6 = 0 \quad (17)$$

By solving the above quadratic equation we get:

$$a = 2, \frac{3}{2} \quad (18)$$

By substituting the value of 'a' in Eq.16, we get:

$$b = 2, \frac{4}{3} \quad (19)$$

But when  $a = \frac{3}{2}$  and  $b = \frac{4}{3}$  it does not satisfies the Eq.3

So the final value of a and b are:

$$a = 2 \text{ and } b = 2 \quad (20)$$

From the figure it is clearly verified that the theoretical solution matches with the computational solution.
