

## Problem 1.9.12

ee25btech11023-Venkata Sai

August 26, 2025

## 1 Problem

## 2 Solution

- Formulas
- Obtaining Distance
- Finding Midpoint
- Plot

## 3 C Code

## 4 Python Code

# Problem Statement

Find the length of the segment joining **A**( $-6, 7$ ) and **B**( $-1, -5$ ). Also, find the midpoint of AB.

Variable	Description	Values
A	Point	$(-6, 7)$
B	Point	$(-1, -5)$
P	Midpoint of AB	$(x, y)$

Table: Variables given

# Formulas

Formula:

Let  $(x_1, y_1)$  and  $(x_2, y_2)$  be any two points. Distance Formula is given by

$$\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \quad (3.1)$$

Midpoint Formula:

$$\mathbf{P} = \frac{k(\mathbf{B}) + (\mathbf{A})}{k + 1} \quad (3.2)$$

Where:

$$k = 1$$

$$\mathbf{A} = \begin{pmatrix} -6 \\ 7 \end{pmatrix} \quad \mathbf{B} = \begin{pmatrix} -1 \\ -5 \end{pmatrix} \quad (3.3)$$

## Obtaining Distance

$$\begin{pmatrix} -6 \\ 7 \end{pmatrix} = \begin{pmatrix} x_1 \\ y_1 \end{pmatrix} \quad (3.4)$$

$$\begin{pmatrix} -1 \\ -5 \end{pmatrix} = \begin{pmatrix} x_2 \\ y_2 \end{pmatrix} \quad (3.5)$$

$$\text{Distance} = \sqrt{(-1 - (-6))^2 + (-5 - 7)^2} = \sqrt{(5)^2 + (-12)^2} \quad (3.6)$$

$$= \sqrt{25 + 144} \quad (3.7)$$

$$= \sqrt{169} \quad (3.8)$$

$$= 13 \quad (3.9)$$

## Finding Midpoint

$$P = \frac{B + A}{2} = \frac{\begin{pmatrix} -6 \\ 7 \end{pmatrix} + \begin{pmatrix} -1 \\ -5 \end{pmatrix}}{2} = \frac{\begin{pmatrix} -7 \\ 2 \end{pmatrix}}{2} \quad (3.10)$$

$$= \begin{pmatrix} \frac{-7}{2} \\ 1 \end{pmatrix} \quad (3.11)$$

$$(3.12)$$

Hence the coordinates of **P** are  $(\frac{-7}{2}, 1)$
