- (C) P-3, Q-2, R-4, S-1
- (D) P-3, Q-4, R-2, S-1

(GATE MT 2008)

49) An annealed hypoeutectoid steel has 10% of proeutectoid ferrite at room temperature. The eutectoid carbon content of the steel is 0.8%. The carbon content in the steel in percent is

- (A) 0.58
- (B) 0.68
- (C) 0.72
- (D) 0.78

(GATE MT 2008)

50) The melting point and latent heat of fusion of copper are 1356 K and 13 kJ mol<sup>-1</sup>, respectively. Assume that the specific heats of solid and liquid are same. The free energy change for the liquid to solid transformation at 1250 K in kJ mol<sup>-1</sup> is

- (A) -4
- (B) -3
- (C) -2
- (D) -1

(GATE MT 2008)

- 51) According to the Clausius Clapeyron equation, the melting point of aluminium
  - (A) increases linearly with pressure
- (C) increases exponentially with pressure
- (B) decreases linearly with pressure
- (D) does not vary with pressure
- 52) Match the cast irons in Group 1 with the distinguishing microstructural features in Group 2

## Group 1

- (P) Grey cast iron
- (Q) Ductile cast iron
- (R) Malleable cast iron

(A) P-3, Q-5, R-4, S-2

(B) P-1, Q-5, R-4, S-2

(S) White cast iron

- Group 2
- (1) Temper graphite
- (2) Pearlite
- (3) Graphite flakes
- (4) Massive cementite
- (C) P-2, Q-4, R-5, S-3
- (D) P-3, Q-5, R-1, S-4

(GATE MT 2008)

53) Match the casting defects in Group 1 with causes given in Group 2

### Group 1

- (P) Hot tear
- (Q) Misrun
- (R) Blister
- (S) Rat tail
- (A) P-1, Q-2, R-3, S-4
- (B) P-3, Q-4, R-1, S-2

- Group 2
- (1) Insufficient melt super heat
- (2) High residual stresses
- (3) Improper venting
- (4) Expansion of sand
- (C) P-4, Q-3, R-2, S-1
- (D) P-2, Q-1, R-3, S-4

(GATE MT 2008)

54) The thickness of a plate is to be reduced from 60 to 30 mm by multipass rolling. The roll radius is 350 mm and coefficient of friction is 0.15. Assuming equal draft in each pass, the minimum number of passes required would be

MT 8/??

(A) 2

(B) 4

(C) 5

(D) 6

(GATE MT 2008)

55) Match the particle morphologies in Group 1 with the powder production methods in Group 2

#### Group 1

(P) Superalloy powder with rounded morphology

- (Q) Monosized spherical Ta powder
- (R) Fe powder with onion peel structure
- (S) Irregularly shaped W powder

(A) 
$$P-2, Q-1, R-4, S-3$$

(B) 
$$P-1, Q-4, R-3, S-2$$

## Group 2

- (1) Carbonyl process
- (2) Gas atomization
- (3) Oxide reduction
- (4) Rotating electrode process

(C) 
$$P-2, Q-4, R-1, S-3$$

(D) 
$$P-4, Q-1, R-2, S-3$$

(GATE MT 2008)

56) One mole of monatomic ideal gas is reversibly and isothermally expanded at 1000 K to twice its original volume. The work done by the gas in Joules is

(A) 2430

(B) 2503

(C) 5006

(D) 5763

(GATE MT 2008)

57) In the Ellingham diagram C $\rightarrow$ CO line intersects M $\rightarrow$ MO line at temperature  $T_1$  and N $\rightarrow$ NO line at temperature  $T_2$ . M and N are metals.  $T_2$  is greater than  $T_1$ . The correct statements among the following are:

- (P) carbon will reduce both MO and NO at temperatures  $T_1 > T_2$
- (Q) carbon will reduce both MO and NO at temperatures between  $T_1$  and  $T_2$
- (R) carbon will reduce both MO and NO at temperatures  $T_2 < T_1$
- (S) carbon will reduce MO but not NO at temperatures between  $T_1$  and  $T_2$
- (T) carbon will reduce NO but not MO at temperatures between  $T_1$  and  $T_2$

(A) P, S

(C) R, S

(B) Q, T

(D) P, T

(GATE MT 2008)

58) Match the forms of corrosion in Group 1 with the typical examples in Group 2

## Group 1

- (P) Filiform corrosion
- (Q) Crevice corrosion
- (R) Galvanic corrosion
- (S) Stress corrosion cracking

## Group 2

- (1) Austenitic stainless steel in chloride environment
- (2) Nut bolt with gasket
- (3) Painted food cans
- (4) Steel studs in copper plate

(A) 
$$P-3, Q-2, R-4, S-1$$

(B) 
$$P-1, Q-3, R-4, S-2$$

(C) 
$$P-3, Q-4, R-2, S-1$$

(D) 
$$P-2, Q-3, R-4, S-1$$

(GATE MT 2008)

59) Given the following assertion 'a' and the reason 'r', the correct option is **Assertion a:** Phosphorous removal in steelmaking is favoured by basic slag **Reason r:** Basic slag decreases the activity of P<sub>2</sub>O<sub>5</sub> in the slag

MT 9/??

- (A) Both a and r are true and r is the correct (C) a is true but r is false reason for a
- (B) Both a and r are true

- (D) Both a and r are true but r is not the correct reason for a

(GATE MT 2008)

60) Given the following assertion 'a' and the reason 'r', the correct option is Assertion a: In Bayer's process high pressure is used to dissolve alumina from bauxite **Reason r:** Pressure increases the boiling point of water

- (A) Both a and r are correct, but r is not the (C) Both a and r are correct and r is the correct correct reason for a
- (B) Both a and r are false

- reason for a
- (D) a is true but r is false

(GATE MT 2008)

61) Match the alloys in Group 1 with the main precipitates responsible for hardening in Group 2

#### Statement for Linked Answer Questions 84 and 85:

Mg casting with a volume to surface area ratio (casting modulus) of 0.1 m is made by gravity die casting. Heat transfer coefficient at the metal-mould interface is 1.9 kJ m $^{-2}$  K $^{-1}$  s $^{-1}$ . The density and melting point of Mg are 1700 kg m $^{-3}$  and 923 K, respectively. Assume ambient temperature to be 293 K.

84) If the solidification time is 50 s, the latent heat of fusion in kJ mol<sup>-1</sup> is
