Question:

If a line makes an angle of 30° with the positive direction of the X-axis, 120° with the positive direction of the Y-axis, then find the angle which it makes with the positive direction of the Z-axis

Solution:

Let the direction (unit) vector of the line be

$$d = \begin{bmatrix} a \\ b \\ c \end{bmatrix}. \quad (1)$$

Condition with x -axis:

$$d^T e_x = \cos 30^\circ \quad (2)$$

$$\begin{bmatrix} a & b & c \end{bmatrix} \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix} = \cos 30^\circ \quad (3)$$

$$a = \frac{\sqrt{3}}{2} \quad (4)$$

Condition with y -axis:

$$d^T e_y = \cos 120^\circ \quad (5)$$

$$\begin{bmatrix} a & b & c \end{bmatrix} \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix} = \cos 120^\circ \quad (6)$$

$$b = -\frac{1}{2} \quad (7)$$

Now using normalization:

$$d^T d = 1 \quad (8)$$

$$\begin{bmatrix} a & b & c \end{bmatrix} \begin{bmatrix} a \\ b \\ c \end{bmatrix} = 1 \quad (9)$$

$$a^2 + b^2 + c^2 = 1 \quad (10)$$

$$\left(\frac{\sqrt{3}}{2}\right)^2 + \left(-\frac{1}{2}\right)^2 + c^2 = 1 \quad (11)$$

$$\frac{3}{4} + \frac{1}{4} + c^2 = 1 \quad (12)$$

$$c^2 = 0 \quad \Rightarrow \quad c = 0 \quad (13)$$

Hence,

$$d = \begin{bmatrix} \frac{\sqrt{3}}{2} \\ -\frac{1}{2} \\ 0 \end{bmatrix} \quad (14)$$

Angle with z -axis:

$$d^T e_z = \cos \theta \quad (15)$$

$$\begin{bmatrix} \frac{\sqrt{3}}{2} & -\frac{1}{2} & 0 \end{bmatrix} \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix} = \cos \theta \quad (16)$$

$$0 = \cos \theta \quad (17)$$

$$\theta = 90^\circ \quad (18)$$

Therefore, the line makes angles of 30° , 120° , and 90° with the x -, y -, and z -axes, respectively.
